

Breathing Air Protection

Fill Hose Assembly

Breathing Air Cascade Systems offer a compressed breathing air supply for a variety of industrial applications. All of our High-Pressure Breathing Air Cylinders are filled with fresh, ambient air compressed to the Grade D standards of the Compressed Gas Association, and tested to CSA 180.1-00 Standards. Cylinders are pre-assembled in cascade systems complete with CGA connecting hardware and pressure-reducing regulators. Unless Systems are used in conjunction with a high pressure Breathing Air Compressor we recommend using 4500 psi systems when filling SCBA and SABA Cylinders.

- Deluxe fill hose is 6' long with shut-off valve. Features 6000 psi gauge with rubber boot, bleeder valve, shut-off control and hand tight nut and nipple that will fill either 2216 psi or 4500 psi. Connects directly to a CGA-346 or CGA-347 male thread.
