

## Gas Detection and Monitoring

### **Draeger Accuro Hand Sampling Pump**

For detecting and measuring a wide range of potentially hazardous gases and vapors, the Accuro Pump is a hand-operated sampling pump with a controlled stroke for a consistent draw. The design features a rubber grip, built-in stroke counter and tube opener. Operates on the basis of drawing a specific amount of air through the detector tube, and the concentration level is determined by the amount of color change indicated on the tubes.
