

Gas Detection and Monitoring

MSA SOLARIS

The Solaris Multigas Detector is a durable, reliable, easy to use portable instrument for detecting the presence of O₂, H₂S, CO and combustible gas. It is designed to withstand rough handling in harsh environments. Best of all, it delivers MSA's commitment to quality at the smallest size.

The Solaris is cased in rubberized armor that helps to absorb impact if the unit is accidentally dropped and the IP 65 rating provides superior protection against liquid and dust ingress. This also helps ensure that the Solaris Multigas Detector will perform reliably in the harshest industrial environments.
